

Step 1: Prep the surface using soapy water to remove any dirt and grime that may be on the surface. You can use isopropyl alcohol to remove any sticky residue. Make sure surface is dry.

Step 2: Position your graphics and tape into place using a strip of tape to act as a centre hinge.

Step 3: Peel the graphics back to your centre hinge and cut the wax backing off.

Step 4: Starting from the centre, slowly apply the graphics to the surface using a squeegee or credit card. Be sure to work your way from the centre out in small strokes taking "little bites".

Step 5: Remove the centre hinge and peel wax backing from the inside out.

Step 6: Repeat step 4 working your way from the centre out.

Step 7: Remove the transfer tape from your graphics. Should any of your graphics begin to lift, go over it again with your squeegee/credit card to ensure it adheres to your surface.

Step 8: If your graphics came with any registration marks, remove and discard.

Step 9: Your done!
